

### Safety - ABCs of Fall Protection - Connectors

A connector, such as a shock-absorbing lanyard or self-retracting lifeline, is a device that links the user's full-body harness to an anchorage. When used with a fall restraint system, the connector must be short enough so that the worker cannot reach a fall hazard.

Never tie a knot in lanyard. This will reduce the strength. Attach lanyards to back "D"-Ring only. Rope lanyard may be attached to side "D" Ring for positioning only. When using shock-absorbing lanyards, attach shock pack end to back "D"- Ring. Only use lanyards with double-locking snaps.

Retractable life lines are faster reacting, allow a larger working area, and reduce shock. Do not use these at more than a 30° angle.
